

Hartley H12/2 Rigging guide

The H12/2 is very simple to rig. Firstly remove the cover and then fit the rudder, just like any other dinghy. Make sure the pin is pushed down so we don't lose the rudder when inverted.

The Jib is a simple.. pull on the blue rope on the side of the mast. Pull from below the pulley and cleat off. Needs quite a bit of force to get it tight. Leave forestay attached.

To hoist the main sail make sure the main halyard is through the eye in the top of the sail, and pull the red halyard on the other side of the mast. And cleat off.

Main sheet should remain in place.

The outhaul is like a Pico. Hook on the boom through the eye at the rear of the main sail. Pull tight using the white outhaul on the boom and cleat.

Putting the H12/2 away. Simply reverse the process from putting everything up! Attach the cover using the main halyard to raise the cover so it does not pond.
